

NIKITA KHOMITSEVYCH

hamsternik9@gmail.com | github.com/hamsternik | linkedin.com/in/nkhomitsevych

Lead iOS Engineer with 10+ years on Apple platforms (iOS, macOS). Built and led mobile teams (up to 4 engineers), drove architecture across Healthcare, Fitness and IoT business domains. Engineered to FDA compliance standards in safety-critical environments. Full-stack capable (React, Next.js, PostgreSQL).

Experience

Lead iOS Engineer

Mar 2025 – Present

Kensa Health

- Reverse-engineered a proprietary 12-bit packed binary protocol over BGXpress serial-BLE for the certain ECG device, that delivers 3-lead real-time ECG visualization at 256 Hz with 33ms render latency — fully unit-testable against captured hex dumps.
- Architected a unified Bluetooth layer supporting 4 heterogeneous medical devices (vendor SDK, BGXpress serial, standard GATT, file replay) through a standalone module (package) by an actor-based live implementation. Integrated within UDF architecture in the main iOS code base.

Senior iOS Engineer

Aug 2024 – Jan 2025

Loblaw Digital

- Designed and delivered a **new subscription system** for in-store physical products, allowing users to manage recurring orders automatically (no need to reorder manually).
- Championed the introduction of a **UseCase** domain layer within the iOS architecture, improving testability for the entire iOS eng team.

Founding iOS Engineer | Software Engineer

Jan 2023 – Aug 2024

Wurthy (Profitable solutions for growing businesses)

- Built and delivered the MVP iOS app delivering a new C2C Buy-Now-Pay-Later experience. Designed architecture (MVVM+Coordinator) and managed a team of 3 iOS engineers.
- Sunset the iOS product after company pivot to B2B category, driving transition planning and team realignment.
- Developed a business web app (boosting sales and enabling monthly recurring revenue) and a customer web app (flexible checkout flow for buyers). Built products using **Next.js**, **React 19**, **Tailwind**, **PostgreSQL (Supabase)**, **Prisma ORM**, **REST API design**.

Senior iOS Engineer

Jan 2020 – Apr 2022

Life360 Inc. (Family safety through location sharing)

- Managed a **team of 4 mobile developers (Android and iOS)**, tackling requirements processing, delivery responsibilities and people management.
- Designed and led the Lead Generation feature to provide **personalized auto insurance plans** for customers (*30+ million MAU, end of Q1 2022*).
- Developed user's driving experience workflow, created brand new *Driving* tab to see driving statistics and promote safe driving. Technologies included Swift, UIKit, RxSwift, Uber RIBs, XCTest.

iOS Software Engineer

Nov 2018 – Dec 2019

BetterMe USA (Personalized holistic wellness solution)

- Build the Health Coaching and Mental Health apps from scratch using **Redux architecture**.
- Migrated the Mental Health app from VIPER to Redux architecture.

iOS Software Engineer

Oct 2015 – Sep 2018

CyberVision, Inc.

Project: Nuvo: applications for pregnant women and doctor.

- Developed iOS applications for manufactured FDA cleared device for remote nonstress tests for pregnant women to monitor real-time health indicators.
- Architected and developed a separate SDK to deal with device via Bluetooth Classic. Supported FDA and MFi device certification from engineering side.
- The application was designed to scale in mind using VIPER design pattern and BDD testing approach (Quick, Nimble).

Technical Stack

iOS: Swift, Objective-C, SwiftUI, UIKit, Swift Concurrency, Swift Testing, RxSwift, GCD, XCTest, Redux, MVVM.

Full-stack: React, React Native, Next.js, JavaScript, TypeScript, PostgreSQL, WebSockets.
Tools: Make, Fastlane, GitHub Actions.

Education

Master's Degree in Computer Science

2017–2018

Igor Sikorsky Kyiv Polytechnic Institute, Biomedical Engineering Department
